360 Cyber Academy

Cyber Security for Leaders

Cyber Security for Leaders builds capacity to understand and effectively analyze cyber security risks relevant to your institution and develop cyber security resilience for future challenges accordingly.

Background

This training course is based on the following facts:

- Cybercrime is one of the biggest threats for businesses or organizations in the next two decades;
- Reliable information for strategic awareness that creates a robust foundation for cyber security
- Improved situational awareness and education helps organizations to prepare and protect themselves from constantly changing cyber and hybrid threats
- The key to success is better knowledge about relevant cyber security risks and effective leadership accordingly
- Prevention and responsiveness are the key competences for better risk tolerance as well as well-educated personnel

Objectives

This course builds capacity to understand and effectively analyze (by applying cyber insights) cyber security risks relevant to your institution and develop cyber security resilience for future challenges accordingly.

In addition, the course aims at preparing your company to act as our partner in provision of cyber security expert services nationally.

This course helps you to create better protection against cyber security risks, improves your competitiveness and opens new business opportunities.
